

Work Method

Preparing the basic table

At the beginning of the day a basic table must be prepared.

This table contains basic items you need throughout the whole day.

These items can be taken off the table by the scrub nurse before starting the operation (with clean gloves only) and by the circulating nurse throughout the day (with a chettle forceps).

The table needs to be draped with a big linen towel, or a trolley cover when disposable material is being used.

The table contains the following:

Gowns

Gloves

Gauzes

Towelclamps

Draping material

Make sure that this table is kept sterile the whole day and that it doesn't become contaminated.
